

## Using manipulatives to play Towers

You'll need 4 towers in each of 4 heights. Ideally, each height should be a different colour. This makes some of the relationships that much easier to see. Those plastic 1" cubes that click together are perfect.

You'll also need a grid for each group. I put the grids in plastic page protectors in order to emphasise that students are not to write on them. This also encourages students to check and double-check with a given puzzle, which is good for developing attention to detail.

# Grid for Towers
